CHICAGO "PINK EYE"

Chicago, Nov. 13.—"Pink eye" is said by some of the prominent physicians of the city to have reached the proportion of an epidemic in Chicago. School children are among the worst sufferers, the pupils at the Doolittle School having felt the scourge for more than a week past.

The disease is one of the most contagious known to medicine and sometimes travels through an entire family. On the first signs of inflammation near the corner of the eye a physician should be consulted. If no corrective measures are used, suppuration will start and continue for a day in the eye affected. When a cure is near the other eye becomes afflicted in the same way. The patient has then a pair of eyes of the kind that have been referred to as looking like "burnt holes in a blanket," and he is kept busy using applications to keep them open.

"Pink eye" has only one thing to recommend it—it is not fatal. It generally lasts three days.

One of the greatest strides in kodakery is the Kodak Developing Tank. It follows the idea of the kodak developing machine but is a great improvement. Come and have a look at it at Honolulu Photo-Supply Co.

GO TO EXPENSE FOR PUBLIC CONVENIENCE

New gates to prevent crowds from coming in contact with incoming vessels, installed at the suggestion of Dr. L. E. Cofer, of the Marine Hospital and Public Health Service, were put into effect yesterday at the Oceanic dock for the first time. The partitions were placed at the mauka end of the covered wharf and hundreds of people crowded into the enclosure to watch the Alameda tie up. If everything goes as it has since October 30th the gates will not be used after December 28th. The Pacific Mail Company has not as yet installed this kind of gates at the wharves, but it is probable that they will after it has been seen how successfully they work at the Oceanic dock. When boats for the Coast depart the band will be allowed on the wharf, inside the gates, and will play as formerly. These gates were built at the expense of the Territorial government at Dr. Cofer's suggestion. Their origin was purely for the accommodation of the public under the prevailing conditions.

Thumping the keys of a piano is not music, and putting successively various lenses before the eyes is not an examination, even though certain improvements in vision are obtained.

Anybody can test your eyes—you can do it yourself, but the scientific use of lenses involves something more than guessing.

Few can examine eyes and do it intelligently and satisfactorily—quite a difference between eye-tests and eye examinations. Did that fact ever occur to you?
